IDEATION PHASE

Empathy Map Canvas

Student: Sheetal   Project: Global Fuel Prices and Taxation Trends Dashboard

Primary users

Energy policy consultants, global supply-chain managers, and energy economics researchers.

SAYS

• “I need to compare fuel prices across countries.”

• “I need a clear view of tax and subsidy differences.”

THINKS

• Fuel-cost differences may affect policy and operating decisions.

• Crude-oil movements may provide useful context, but may not fully explain retail prices.

DOES

• Compare country-level metrics.

• Review trends and identify outliers.

• Use charts to prepare recommendations or further analysis.

FEELS

• Needs confidence that charts are easy to interpret.

• May feel uncertain when prices, tax, and subsidies differ across countries.

PAINS

• Many countries and multiple fuel types are difficult to compare in raw tables.

• Aggregated charts can hide local differences or missing data.

GAINS

• A single dashboard for comparing fuel types and country groups.

• Faster identification of patterns for further investigation.

Design response

Use clear chart titles, consistent units, readable country labels, filters where available, and notes that describe patterns without claiming causation.

Submission note: These are filled content drafts prepared from the project details available. Check them against the official SkillWallet template fields and add any required official Team ID or institution-specific information before submission.
