REQUIREMENT ANALYSIS PHASE

Functional and Non-functional Requirements

Student: Sheetal   Project: Global Fuel Prices and Taxation Trends Dashboard

Project objective

Deliver a Tableau dashboard that helps users explore global fuel prices and related tax, subsidy, income-level, and crude-oil measures.

Functional requirements

• Load the supplied CSV dataset into Tableau.

• Show country-wise average petrol, diesel, and LPG prices.

• Show tax percentage by country and/or income level.

• Show petrol price comparisons by subsidy level.

• Show Brent crude price over time using the date field.

• Provide an overview dashboard with readable titles and appropriate chart types.

Non-functional requirements

• Charts should be readable and consistently formatted.

• Metric aggregation and units should be clear.

• The dashboard should open in Tableau Public and the workbook should be saved.

• Documentation should include the published dashboard URL once copied by the student.

Dataset fields

The supplied dataset was identified as containing 27,468 rows and 10 columns: date, country, region, income_level, subsidy_level, petrol_usd_liter, diesel_usd_liter, lpg_usd_liter, brent_crude_usd, and tax_percentage.

Acceptance criteria

• All required charts load without errors.

• Titles and axes identify the measure being shown.

• The dashboard addresses the three project scenarios.

• Workbook file and documentation are saved for submission.

Submission note: These are filled content drafts prepared from the project details available. Check them against the official SkillWallet template fields and add any required official Team ID or institution-specific information before submission.
