PROJECT DEVELOPMENT PHASE

Implementation Summary

Student: Sheetal   Project: Global Fuel Prices and Taxation Trends Dashboard

Tools used

• Tableau Public Desktop

• CSV dataset: global_fuel_prices_Dataset

• Google Drive for phase templates and deliverables

• GitHub for project version and file sharing

Implementation steps

• Connect Tableau to the CSV text file.

• Check date and measure data types.

• Build country-level fuel-price charts.

• Build tax, subsidy, income-level, and crude-oil trend charts.

• Place worksheets on the dashboard and set appropriate fit options.

• Give the dashboard the title “Global Fuel Prices Dashboard”.

• Publish the dashboard to Tableau Public and save a local .twb workbook.

Current workbook

The local workbook was saved as Global_Fuel_Prices_Dashboard.twb on the Desktop.

Validation reminders

• Reopen the workbook to confirm it loads.

• Confirm the CSV connection still works.

• Ensure the ninth visualization is not merely a duplicate of another chart.

• Copy the actual Tableau Public URL from the browser; do not type or invent it.

Submission note: These are filled content drafts prepared from the project details available. Check them against the official SkillWallet template fields and add any required official Team ID or institution-specific information before submission.
