PERFORMANCE TESTING PHASE

Dashboard Testing Checklist

Student: Sheetal   Project: Global Fuel Prices and Taxation Trends Dashboard

Test cases

• Open the Tableau workbook and verify that the data source connects.

• Check that country names appear on country-wise charts.

• Check that price and tax axes show the intended measure and aggregation.

• Confirm the Brent crude trend uses Date on the time axis.

• Compare petrol, diesel, and LPG charts for consistent units.

• Check dashboard layout at the published view size.

• Check for duplicate charts and replace any duplicate with a distinct relevant visualization.

• Open the Tableau Public link in a private/incognito window to verify public accessibility.

Expected result

The dashboard loads without errors, charts are readable, measures match their titles, and the published link can be opened by the reviewer.

Known limitations

This document is a test plan; do not mark a test as passed until it has been checked on the actual workbook and published dashboard.

Submission note: These are filled content drafts prepared from the project details available. Check them against the official SkillWallet template fields and add any required official Team ID or institution-specific information before submission.
